

**THE TA**

# THETA

Theta is passionate about custom furniture design and teamwork with architects, interior designers, contractors, and clients. Our services are very particular, covering all facets from beauty to functionality to quality. Our team brings their years of experience to every room in the home, from the kitchen to the bathroom, dining room, living areas, bedrooms, closets and dressing rooms, laundry rooms, and beyond. Our reach extends beyond residential though, spanning commercial stores, bars, and office spaces too.

At the heart of it all lies our vision to offer our clients bespoke services, where no two custom furniture pieces are ever the same. We give each unique project the individual attention it deserves, every time.

BEFORE

AFTER

The *Theta* team wowed once again with this breathtaking kitchen onset, working as a team with excellent interior designers. We removed all columns in sight and lowered the drywall drawers. The floors were also modified, the strong tones from the paint were removed and we brought the space to life through natural wallpapers. All of this was made complete by modern furniture, functional suitable for everyday use. This is how we made the heart of this home warmer and more comfortable, with a modern aesthetic.

BEFORE

AFTER

Same project different angle of view

## BATHROOM

Aesthetics were the priority of this project, to appreciate the warmth and simplicity in a very bright environment. As always, the *Theta* team worked hard to obtain a useful and functional furniture.

## KITCHEN

Space, comfort, and functionality. These three cornerstones formed the foundation for this beautiful space. A telescopic table adapts depending on the usage, completed by contemporary nuances no modern kitchen should be without.

## LAUNDRY

Theta loves a challenge, and even with the odds stacked against us, we turned this small area into a spacious sanctuary. The client appreciated our suggestion of building a dividing cabinet, combining white melamine up front with MDF at the back to simulate a background wall. We succeeded in turning the client's vision into a reality, making functional use of division concepts.

## TABLE

Theta knows a thing or two about space maximization, without compromising comfort. This specific table seats 10 people, without consuming unnecessary floor real estate. Two central legs ensure everyone sits comfortably, without worrying about side legs getting in the way.
